Summary

Native Arabic language specialist with a background in translation, localization QA, and AI-assisted language workflows. Experienced in evaluating AI-generated translations for naturalness, fluency, and cultural relevance, and in refining prompt instructions to improve LLM output quality. Adept at cross-checking domain-specific terminology against approved glossaries, identifying grammatical and stylistic issues, and articulating Arabic grammar rules in written form for AI model guidance. Familiar with GPT-4o and NMT evaluation workflows through coursework and hands-on MTPE projects. Combines strong bilingual EN-AR proficiency with practical localization QA experience to deliver accurate, audience-appropriate language output.

Education

Yarmouk University – Irbid, Jordan, BA in Translation and Interpretation

Oct 2022 – Jun 2026

- GPA: 90.2% (Excellent)

Projects

Intergalactic Wizard Force – Game Localization (EN→AR) – LocJAM | [GitHub](#)

2026

- Localized 834 strings (dialogue, UI, and system strings) for a point-and-click adventure game from English into Arabic.
- Executed a full MTPE workflow: designed context-rich prompts for Google Gemini to generate Arabic MT output, then critically evaluated each output segment for naturalness, fluency, and cultural appropriateness before post-editing in memoQ.
- Identified recurring AI output issues — including unnatural register, mistranslated proper nouns, and incorrect pluralization — and adjusted prompts iteratively to reduce error rates across string batches.
- Maintained a terminology glossary for proper nouns, spell names, and invented terms (e.g., Hyperdrive, Space Chicken) to enforce cross-string consistency and support accurate AI output evaluation.
- Ran memoQ QA checks (tag validation, placeholder integrity, terminology consistency, encoding correctness) across all 834 strings before final delivery.

Overcoming Key Challenges in Website Localization: A Practical Approach –

2026

Yarmouk University (Graduation Project)

- Conducted a practitioner-focused research study on five critical website localization challenges: contextual ambiguity, SEO optimization, character limits, placeholder handling, and Arabic pluralization rules.
- Developed and documented practical guidelines for translators to handle each challenge, including written specifications of Arabic grammar rules and stylistic preferences — directly applicable to writing AI model prompt instructions.
- Proofread bilingual Arabic–English content samples for accuracy, register, and readability, flagging issues that required structural rather than surface-level correction.
- Analyzed a bilingual Student Information System (SIS) dataset and integrated findings with ICU Message Format and industry localization frameworks to produce actionable technical guidance.

TraDep – Translation Department Website – Personal Project | [GitHub](#)

2025

- Built and deployed a bilingual Arabic–English web application (Flask, Flask-Babel) localizing approximately 200 UI strings across 10 templates, implementing a full gettext i18n workflow with PO/POT file management.
- Engineered RTL layout rendering for Arabic with a dynamic language switcher, handling bidirectional text and locale-aware formatting without third-party libraries.
- Integrated a memoQ-compatible localization workflow, managing translation memory (TM) files to maintain consistency across all UI strings.
- Applied localization QA checks to validate string completeness, encoding correctness, and layout integrity across both locales.

Experience

Document Services Assistant | Alhader Library – Irbid, Jordan

Aug 2023 – Present

- Translated and prepared 10+ bilingual Arabic–English documents across academic, administrative, and official document types for library members and researchers.
- Managed end-to-end document workflows — formatting, layout, and quality review — using Microsoft Word and Excel, ensuring consistency and accuracy across bilingual outputs.

Courses

Mastering Translation AI – Crowdin

Mar 2026

- Learned to configure and evaluate AI translation assistants within Crowdin; critically assessed LLM and NMT outputs for fluency, accuracy, and domain fit; compared GPT-based and NMT approaches for different localization workflows.

Introduction to Localization Tools

Feb 2026

- Gained hands-on experience with SDL Trados Studio, memoQ, Crowdin, Lokalise, Smartcat, and Phrase; managed translation memories, termbases, and XLIFF/XML files; applied QA and string validation workflows.

100 Days of Code – Python

Jan 2026

- Built automation scripts, REST API integrations, and Flask web applications; applied Python to real-world file processing and data handling tasks.

Technical Skills

- **Language & Localization QA:** Native Arabic (MSA & Levantine), Arabic grammar and stylistic review, fluency and naturalness evaluation, bilingual EN–AR proofreading, terminology management, style guide development, LQA, RTL handling, pluralization, placeholder review.
- **AI & Translation Tools:** GPT-4o (output evaluation and prompt testing), Crowdin AI, NMT/LLM comparison and assessment, MTPE workflows, prompt instruction writing for language tasks.
- **CAT & TMS Tools:** SDL Trados Studio, memoQ, Crowdin, Lokalise, Smartcat, Phrase, Aegisub.
- **File Formats:** PO/POT, XML, XLIFF, TMX, YAML, JSON.
- **Programming & Development:** Python, Flask, Flask-Babel, HTML, CSS, JavaScript, Git & GitHub, WordPress.
- **Office Tools:** Excel, Word, PowerPoint, Google Docs.

Languages

- **Arabic** — Native
- **English** — Fluent
